FOLDING LINES

Folding Riser

Folding Riser other side

Put the orange LCL line (pic.1) through the loop on the profile and pull it tight. Repeat this step up to Rib 30 (line a12).

Put the yellow LCL line (pic.2) through the A loop on Rib 33 (line a13).

Connect the topline from a1a to a13 with a larks head knot to the LCL lines.

Connect all lines like on the lineplan

X1 Crossline top side is connected with a1a and a2a line (pic.5).

 The X1 crossline bottom side is connected with the riser on the opposite side!

Push the folding riser through the upper pulley connection webbing (pic.6).

Connect the main lines with the folding riser.

Close the maillons with a tool and mount the inserts.

 Before flight you have to check that the folding lines are loose and not under tension!

 Check that there is no twist in the lines!

 The maillons should be closed with a tool and the insert should be mounted!
